Overview

This project demonstrates live API integrations for displaying real-time weather data and rotating inspirational quotes. Built for learning API requests and responsive UI updates.

Weather API

Uses OpenWeatherMap API to fetch current weather by city or zip code. Displays temperature, condition, and wind speed with dynamic rendering in JavaScript.

Quote API

Uses API Ninjas quote endpoint to fetch random motivational quotes. Triggered by a button, and refreshed on demand with clean formatting.

UI/UX Design

Designed for a lightweight user experience - input fields, dynamic responses, and immediate user feedback without page reloads.

Tech Stack

- JavaScript: Handles all API calls and dynamic DOM updates
- HTML/CSS: Creates a clean and simple interface
- OpenWeatherMap & API Ninjas: External data providers

What I Learned

This project taught me how to securely handle API keys (locally), structure fetch requests, and improve the frontend experience using real data.
